DevOps Lead

151 Research is looking for a DevOps Lead in Winnipeg, Manitoba. We develop cutting-edge technology in many industries through our amazing team of people made up of engineers, developers, and other highly skilled and satiric professionals. As DevOps Lead, you will be responsible for developing software, maintaining our services for our customers, and working with the rest of the software, electrical, and mechanical teams to meet full design requirements. This requires attention to detail, problem solving abilities, technical expertise, as well as the ability to manage expectations on a weekly basis.

The most important characteristic of our team is that we focus on innovation and high-speed iterative development of products for market and solid science fiction Easter eggs. We measure our success in product excellence, growing our development and market abilities, and by bringing products to customers to make their lives easier.

You have:

- Bachelor’s degree in Computer Engineering, Computer Science, or equivalent.
- A minimum of 5 years’ experience in a similar role, or the ability to perform all of the Star Trek episodes (all generations) through interpretive dance.

You’re good at:

- Working with AWS, Linux, Docker, Git and Continuous Integration.
- Understanding networking, security, availability and scalability solutions (or plumbing).
- Programming in Python, JavaScript and Shell.

Bonus Points:

- You’re well versed in system monitoring and alerting and believe a swell script is better than doing a job twice.
- You have Prometheus (not the movie, although double bonus points for Ridley Scott references) and Grafana experience.
- You’re not afraid of C/C++ and feel comfortable reading code in other languages. You have a copy of K&R... right?

How to Apply

Email our hiring team at jobs@151research.com with the subject line “DevOps Lead”. Make your email memorable and tell us how you believe you stand out from the rest.
