Software Developer

151 Research is looking for a Software Developer in Winnipeg, Manitoba. We develop cutting-edge technology in many industries through our amazing team of people made up of engineers, developers, and other highly skilled professionals. As a Software Developer you will be responsible for developing software and designing solutions for our products and services and working with the rest of the software, electrical, and mechanical teams to meet full design requirements. This requires attention to detail and technical expertise.

The most important characteristic of our team is that we focus on innovation and high-speed iterative development of products for market. We measure our success in product excellence, growing our development and market abilities, and by bringing products to customers to make their lives easier.

You have:
- Bachelor’s degree in Computer Engineering, Computer Science, or equivalent.
- A minimum of 3 years’ experience in a similar role.

You’re good at:
- Programming in Python, JavaScript, SQL.
- Working in AWS, Linux, Docker.

Bonus Points:
- You’re well versed in CI environments and unit testing.
- You have React or JavaScript framework experience.
- You’re not afraid of C/C++ and feel comfortable reading code in other languages.

How to Apply

Email our hiring team at jobs@151research.com with the subject line “Software Developer”. Make your email memorable and tell us how you believe you stand out from the rest.
